The main UI shader that I have been using for Unity 5 games is SoN (Stock UI). & You can find the sample Assets in: your Unity Home> Asset> Lighting> SoN> Lighting sample. Do you have to have Unity Plus or Pro in order to get the Fuse UI pack? No, you do not. This is an asset that I used that works for both free and paid subscribers. Note, this is a really nice bundle of UI elements, if you have not tried it. Also, there is a GUI shader that will give you more options. This one is called Fuse and also found in: your Unity Home> Asset> Lighting> UI> Fuse. This was added as an asset in Unity 2019.3 As with Fuse, if you have Unity Plus or Pro subscription, you get the Fuse UI pack. If you do not, you can use the one from the asset store. & You'll find the samples in: your Unity Home> Assets> Plugins> Other. & You'll find the asset in: your Unity Home> Asset> Lighting> UI. The latest update to the Fuse UI pack is the Fuse UI 3.0.7.x that fixes some bugs of the previous version. If you have been using Fuse UI 2.x then you should use this version. Here is a video tutorial of how to use it. GUI Shaders Unity 5.x Pro Tutorial Another useful UI shader is PCM. It's very useful in order to add shadows and other lights in your scene. & You can find this in: your Unity Home> Assets> Plugins> Other> GUI> PCM. PCM version is version 4.1. PCM allows you to add some transitions and effects on your UI elements. & You can find all these samples in: your Unity Home> Assets> Plugins> Other> GUI> PCM. The latest version is 5.1.6.1, and you can find some previews on how to use it here. & You can find this in: your Unity Home> Assets> Plugins> Other> GUI> PCM. The standalone player for Linux now supports audio and video formats in addition to OpenGL 3.x. Unity 3D 5.x is a complete rewrite of the basic architecture of Unity, and has a completely new open gaming platform with new scripting capabilities, game play optimizations, and a significantly higher level of engineering. Even though new features are added on a regular basis, most of the developers are still using Unity 3D 5.6 and above to work on most of their projects.
